

Team Contract:

Generally, different group members will be assigned to different parts of the project.

Communication:

- We plan to meet weekly over Discord for about an hour or two to discuss integrating code together and goals.
- We will communicate through Discord.
- We will use discord, google docs, and github to keep track of information and notes.
- We will make sure that everyone gets a chance to talk to share ideas and not dismiss other people's ideas.

Collaboration:

- Work Distribution:
 - Data Importing / Graph Data Structure: Trevor & Rohit
 - BFS/Dijkstra's: Andrew
 - Betweenness Centrality: Josh
 - When necessary, we will work on other parts if they end up being more time consuming.
- Time Commitment:
 - We will spend approximately 4 hours a week on this project per person, if necessary.
 - By the check in point, we each will have started out a portion of the project and have something to show. Things such as completing one implementation of an algorithm or the data structures.

Conflict Resolution:

- We will constructively discuss the issue as a team to find the best solution for everyone
